

Trusted Identity Management for
Enterprise Resources

The only
Identity and Access
Management
Solution
Out Of The Box

**Management of digital
identities and their access to
enterprise information assets**

**iC Compas – TrustedSIMP
The Smart Identity
Management Package**

How companies can manage business
innovation with risks mitigation and cost
reduction – while complex security policies
are properly enforced

A complete pre-configured solution
scalable from single companies to
complex supply chains

Standardized processes enabling our
customers to get an immediately
usable solution

With one click enabling our
customers to fulfill all compliance
requirements in respect to Identity
and Access Management

Based in Strong Authentication
→ Secure Your Security

TrustedSIMP - The Identity Management Package

The easiest and most convenient way to Identity and Access Management

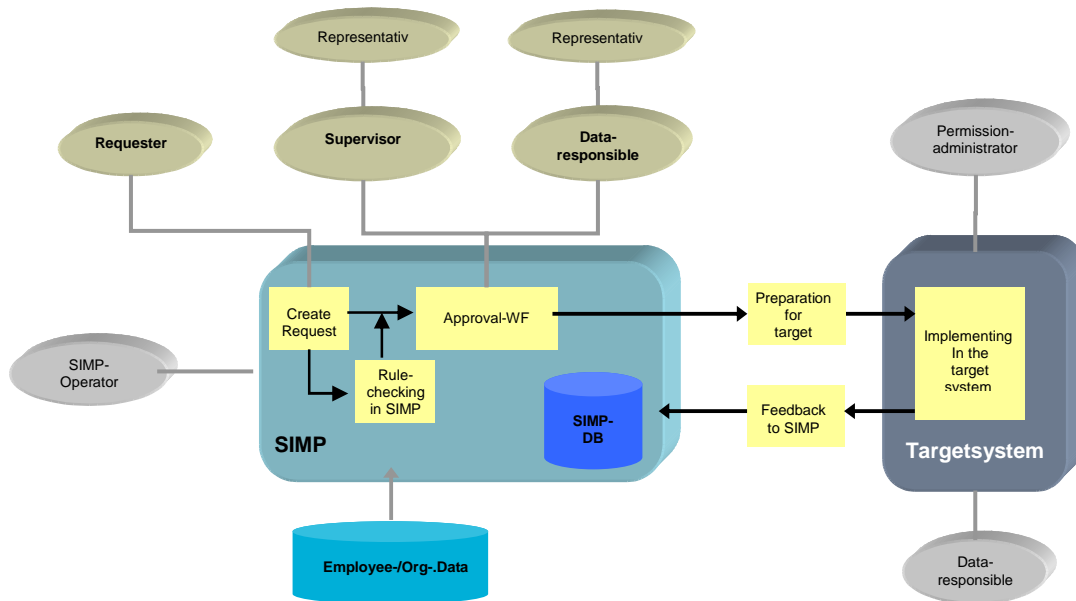

Based on Standards → Simplify Usage

Our **Smart Identity Management Package** is a combination of a complete Identity and Access Management suite and standardized process / role models together with a unified data model which enables you to use a complex solution fitting your requirements "out of a box".

Maximum Functionality together with minimal efforts → Our solutions for your benefit.

Get your process within one click – We know your requirements!

Example: Request process and process participants – Unify all your needs

Compliance Based on Standards → Reach your goals in "No Time"

To be **compliant to SOX, HIPPA, etc.** you can either build an Identity and Access by your own – spending lot of time and money – or rely on our proofed solution which enables you to be up and running in the lowest possible time. Be secured!

No more danger to your business because of unclear process and not existing traceability.

Secure your eBusiness – Safe Business with Portals

Enable a secure and reliable eBusiness within your portals.

Partners, Dealers, Customers, Supply Chain – TrustedSIMP secures all your business processes. Based on unique identities you can concentrate on you main business – TrustedSIMP secures the rest. One central security enforcement grants a safe business - independent of applications and customers.

Single Sing On → An Easy Goal

All your accounts at your fingertips. Combine your identity with all your roles and rights. One solution that fits it all. The final success of a Smart Identity Management Package.

TrustedSIMP - The Identity Management Package

Package Profile

Out-of-the-Box Identity and Access Management

In today's enterprises people and processes are in continual state of change. Users have several identities in several processes. The management of such identities is time and cost intensive. Additionally large companies propagate the use of special portals for their suppliers.

→ TrustedSIMP is a "Out-Of-The-Solution" for Identity and Access Management:

All functionality with minimal effort.

Product Component	Description	Benefits
TrustedDesk Products	The TrustedDesk Solution is a comprehensive, easy-to-use security solution that meets corporate desktop security requirements and provides an integrated suite of components based on secure access, single sign-on, file encryption, secure email and other components like security tokens, biometric or smart cards.	<p>SICRYPT® Smarty Secure Access to PC's and networks using smart cards and/or fingerprint to authenticate authorized users.</p> <p>Allows strong authentication of the Identity Management package. Secure your security!</p> <p>SecuFile stores all files of your choice on encrypted virtual drives on the local hard disk of a PC.</p> <p>With TrustedMIME® you have a solution that effectively secures and protects your e-mail traffic. TrustedMIME® is a security plug-in that seamlessly integrates with the latest versions of Microsoft® Outlook and Lotus Notes.</p>
Unified Processes and Roles	All relevant Identity and Access Management processes are defined and preconfigured. All necessary roles already exist.	Experienced pre-defined workflows save time at customers and allow the easy and fast use of templates.
Central Data Repository	All Standard LDAP-Directories and SQL-Servers are supported.	A fast and reliably storing of all User (+ User relevant) and Workflow data within a unified storage modal allows to the modelling of all your requirements.
Central and unique management	Central component for handling the User Management tasks and the presentation to the Users / Administrators.	Offers a very reliable basement to Identity management with many different function modules (provisioning workflows, organization charts, reports, ...)
Powerful provisioning	<p>Automated management of all standard IT systems</p> <ul style="list-style-type: none"> - Host Based / Distributed Systems - Operating Systems / Groupware - Unix Systems - Security Systems - Etc. <p>Additional customer relevant connectors, like connectors to time-recording and physical access control systems are available. Please ask for details</p>	<p>All accounts, permissions and resources of all attached systems can be handled automatically by the system.</p> <p>Creating of accounts and resources is much faster</p> <p>Increased security: If a persons leaves the company all access accounts are immediately closed</p> <p>Central management off all access-controls and recording systems with one identity.</p>
Single Sign On	With highly secure stored credentials for all used Portals and automated selection and logon to Web-Portals is possible	The user can logon to all portals configured for him only with one click. The access to all applications depends only on the identity of the user.
Compliance	All Identity Management Tasks are controlled by a central compliance instance. During runtime and on lager stages you are able to control each single step of your business	<p>You are able to fulfil all the Identity and Access Management relevant tasks which are relevant to your business in respect to SOX, HIPPA, etc.</p> <p>→ Based on Analysts: A major task for all compliance</p>
Easy Customisability	The product is very easily customizable. All relevant parts (roles, processes, data repository, user interface, etc.) are very easy adaptable to customer requirements	This solution fits completely into your company and infrastructure. Corporate Identity, Network related issues, special processes, Roles and Rights → Easy adaptation to all requirements in a minimal time frame
Secure Web Access	All your eBusiness (e.g. Portals) can be secured due to the easy integration into TrustedSIMP. Based on one central Security Infrastructure it is possible to combine central security with decentred application usage.	You can enable your company to have One Secure Single Point of Access between your business and your customers, partners, dealers. etc. You rely on your business, we care about your security.
